- Vascular
- Small Parts
- Pediatric
- Musculoskeletal
- Contrast
- Cardiac
- TCD

Samsung HS30: Ultrasound System uses newly developed S-Harmonic architecture; The HS30 is designed for hospital and private care - with you - the user in mind. The HS30 can be used in the departments of Radiology, Internal Medicine, Vascular Surgery, Urology, Gynecology, Pediatrics, Preventive Medicine, Orthopedics, Physiotherapy and Emergency Medicine

Digital Beam former:

The Digital Beam former is the 1st step in acquiring high-resolution images for accurate diagnosis. The most ideal signal is transmitted with less side lobes, resulting in reduced noise and less artifact while, at the same time providing remarkable image quality.

S-Harmonic Imaging Engine:

With the advanced technology built on the HS30 system, the digital signals received from the Beam former demonstrates clear, detailed resolution and tissue uniformity for all types of applications in general imaging.

Advanced QuickScan™:

Advanced Quick Scan™ technology maximizes workflow and efficiency, therefore enables users to remain focused on the patient. With a simple touch of a button important imaging parameters are automatically adjusted, such as color gain, location of the color box and angle correct. This feature improves workflow and increases efficiency.
